

Federal Flood Risk Management Resources

Resources Information

Agency: National Aeronautics and Space Administration

Resource: (NASA) NASA Applied Sciences Program

Overview: The Applied Sciences Program promotes efforts to discover and demonstrate innovative and practical uses of Earth science data and knowledge. The Program supports and funds applied research and applications projects that foster uses of Earth-observing satellite data and scientific knowledge by public and private sector organizations in their policy, business, and management decisions. The project results and enhanced decision-making improve quality of life and strengthen the economy. Applications address disasters, ecological forecasting, health and air quality, water resources, and wildfires.

Funding Info:

- All products and tools produced by NASA are free and open, and available to anyone
